DIV. OF OIL, GAS & MINING

### Brief Narrative of Project

North Shore limited Partnership is proposing to begin a project (mine under new regulations) named North Shore Natural Process Minerals. The goal is to produce a high quality mineral concentrate from Great Salt Lake Brines to be used in the manufacture of proprietary products. The precessing is to be facilitated using only natural solar evaporation and precipitation processes without any extensive or intrusive chemical or mechanical precessing. Land use is private property previously used in a salt making operation. Dikes are to be upgraded with the possibility of additional ponds created as needed. Water is to be brought via a small canal from lake level where it can be pumped into the pond. Excess salt are to be returned to the lake via the same canal. This will be a very clean non-intrusive industry.
